As with immediate effect all wooden products of the complete Häcker Küchen model range will comply with the high US-American standards regarding permissible formaldehyde threshold values and at the same time, will once more clearly undercut the European specifications.

Sustainability is the basic principle of the Häcker corporate strategy and also the benchmark for long-standing business success.

Through careful selection of timber materials and suppliers, Häcker Küchen succeeded in complying with the emission guidelines according to CARB2 93120 and TSCA title 6. The maximum values of the European guidelines for emission class E1 are adhered to, or rather significantly undercut.

Corporate responsibility is self-evident for Häcker Küchen. With PURemission, Häcker is setting a new exceptional standard in the kitchen furniture industry.
